Aviation in Europe – Innovating for Growth

The 7<sup>th</sup> European Aeronautics Days

L O N D O N

20 – 23 OCTOBER 2015

# E-Caero2. Harmonizing the European landscape for dissemination of research and innovation in the Aeronautics sector

- **ECCOMAS represented by CIMNE**

- **ERCOFTAC**

- **CEAS**

- **EUCASS**

- **EUROMECH**

- **EUROTURBO**

## Objectives

- Enhance the **communication** between the associations: reaching an upgraded level of communication among partners as a follow-up task of what has been done in E-CAero,
- Set-up of a **logistic platform** with advanced IT tools shared by associations and unify the existing logistics among the consortium, which will help to harmonize the actions from each partner and reach other objectives,
- Progress in the **synchronization of events** as a follow-up of what has been done in E-CAero, avoiding overlapping between organizations and conferences. Merging or clustering events, where appropriate in order to ensure better scientific or technical quality by aggregating expertise and avoiding redundancies,
- Taking initiatives towards **joint publication policy** in Europe,
- Promoting and co-ordinating **federation of associations**, but which nevertheless does not affect negatively activities of each association, [→ AE]

## Concept and approach

The E-CAero 2 project is aimed to go collaboratively further in the operability of a European Association AE and it aims to define jointly a wide coordination mechanism the associations which devote its activities, totally or partially, to aeronautics and air transport. The action will contribute to enhance the impact and accessibility of publications relevant to European aviation and aerospace, in particular those issued from EC funded projects. The deployment of conferences must be strongly rationalized to reduce the duplicity, and overlapping of events, while their visibility is improved and the audience increased. The actions taken in this project are aimed at being self-supportable after the end of the project.

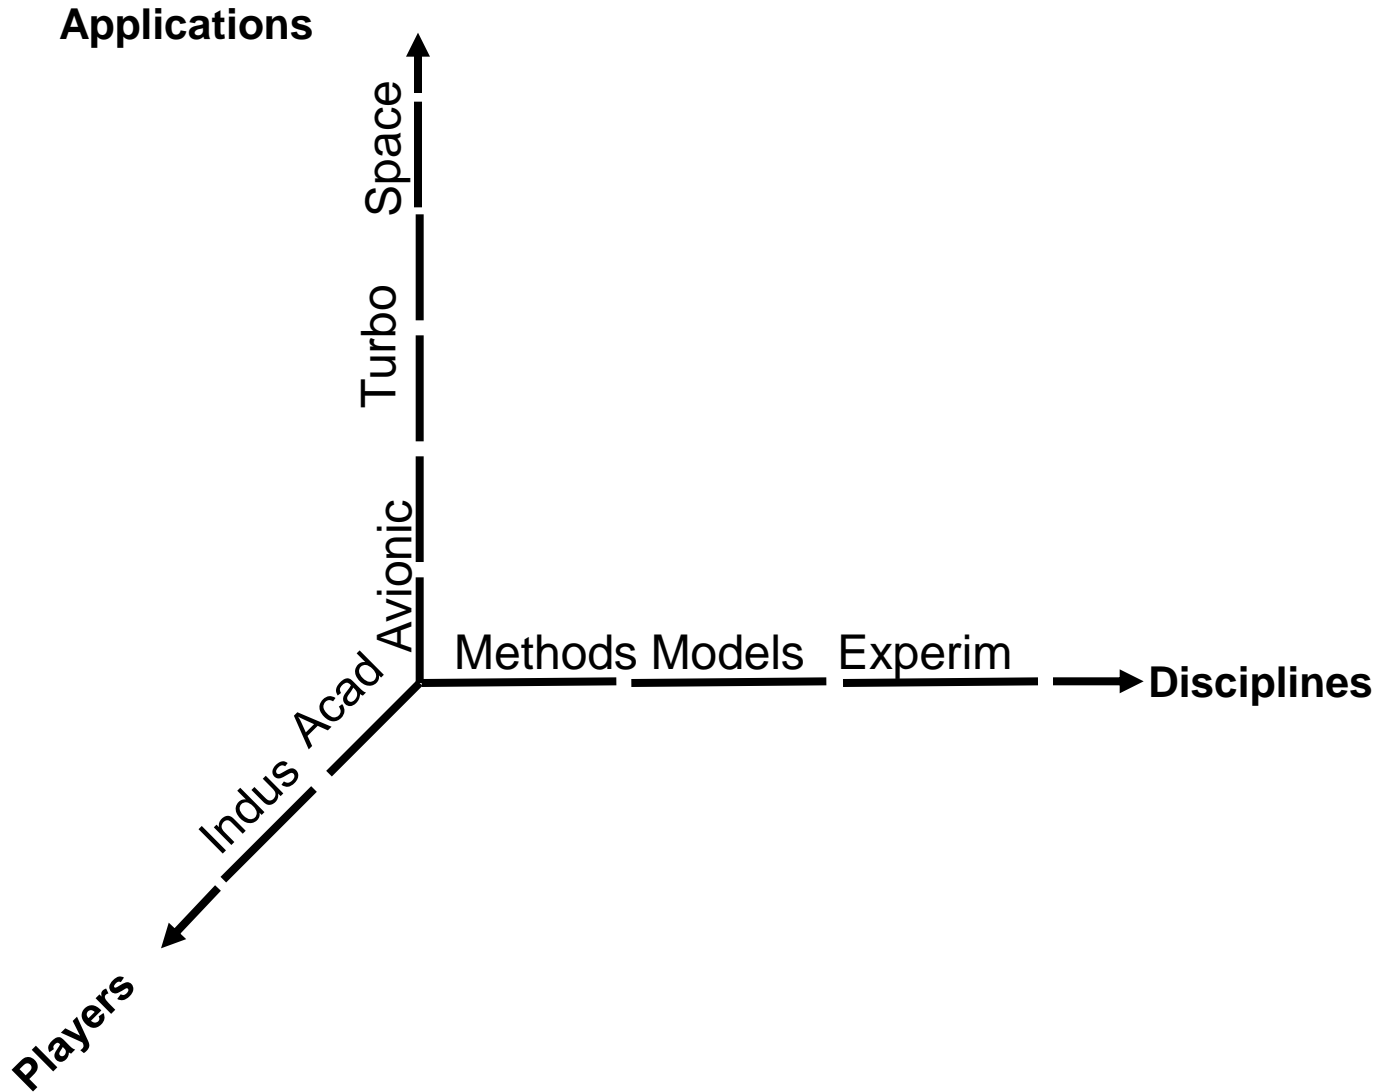

## Incremental goals

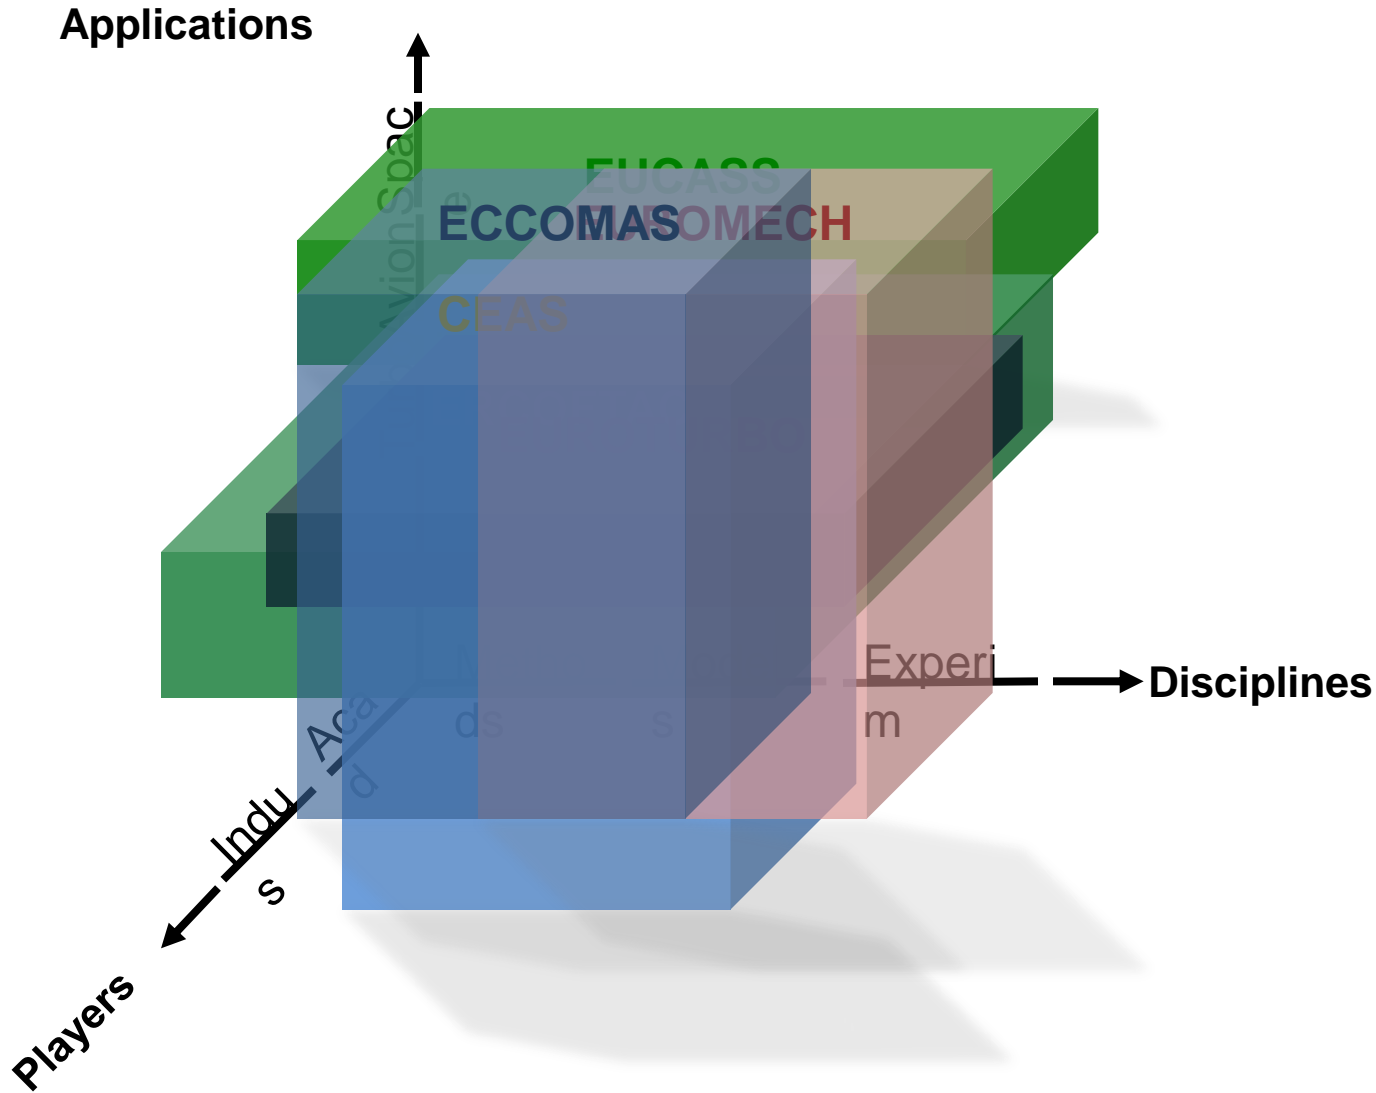

Achievements	After E-CAero	E-CAero2 goals
Communication between associations	Excellent	Excellent
Logistic Platforms	Available for 6 associations	Unified
Time schedule for event	Towards synchronization	Formally approved jointly
Scientific Expertise	Better aggregated to conferences	Structured in joint committees
Events	Organization: multi-associations	ECAA Labeled
Journals and books	Towards joint publication policy in Europe	List of European AA journals recognized by all

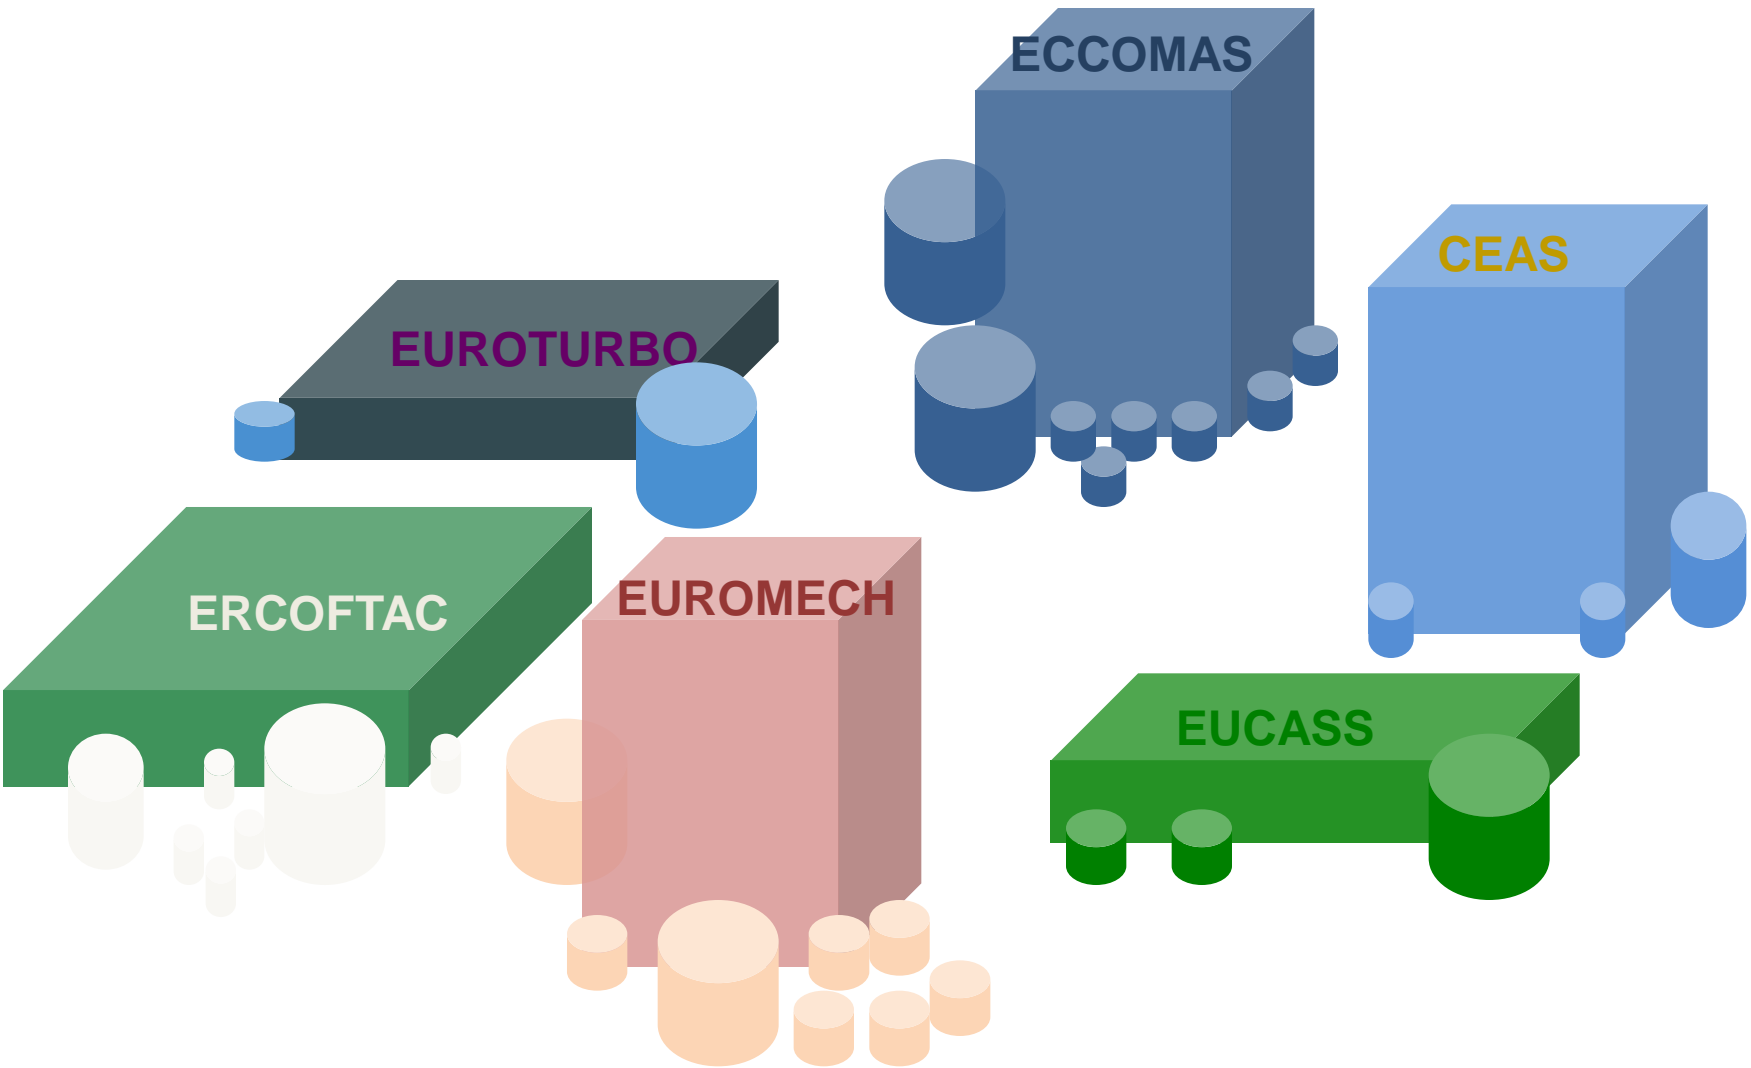

# 3D space for aerospace research

# 3D space for aerospace research

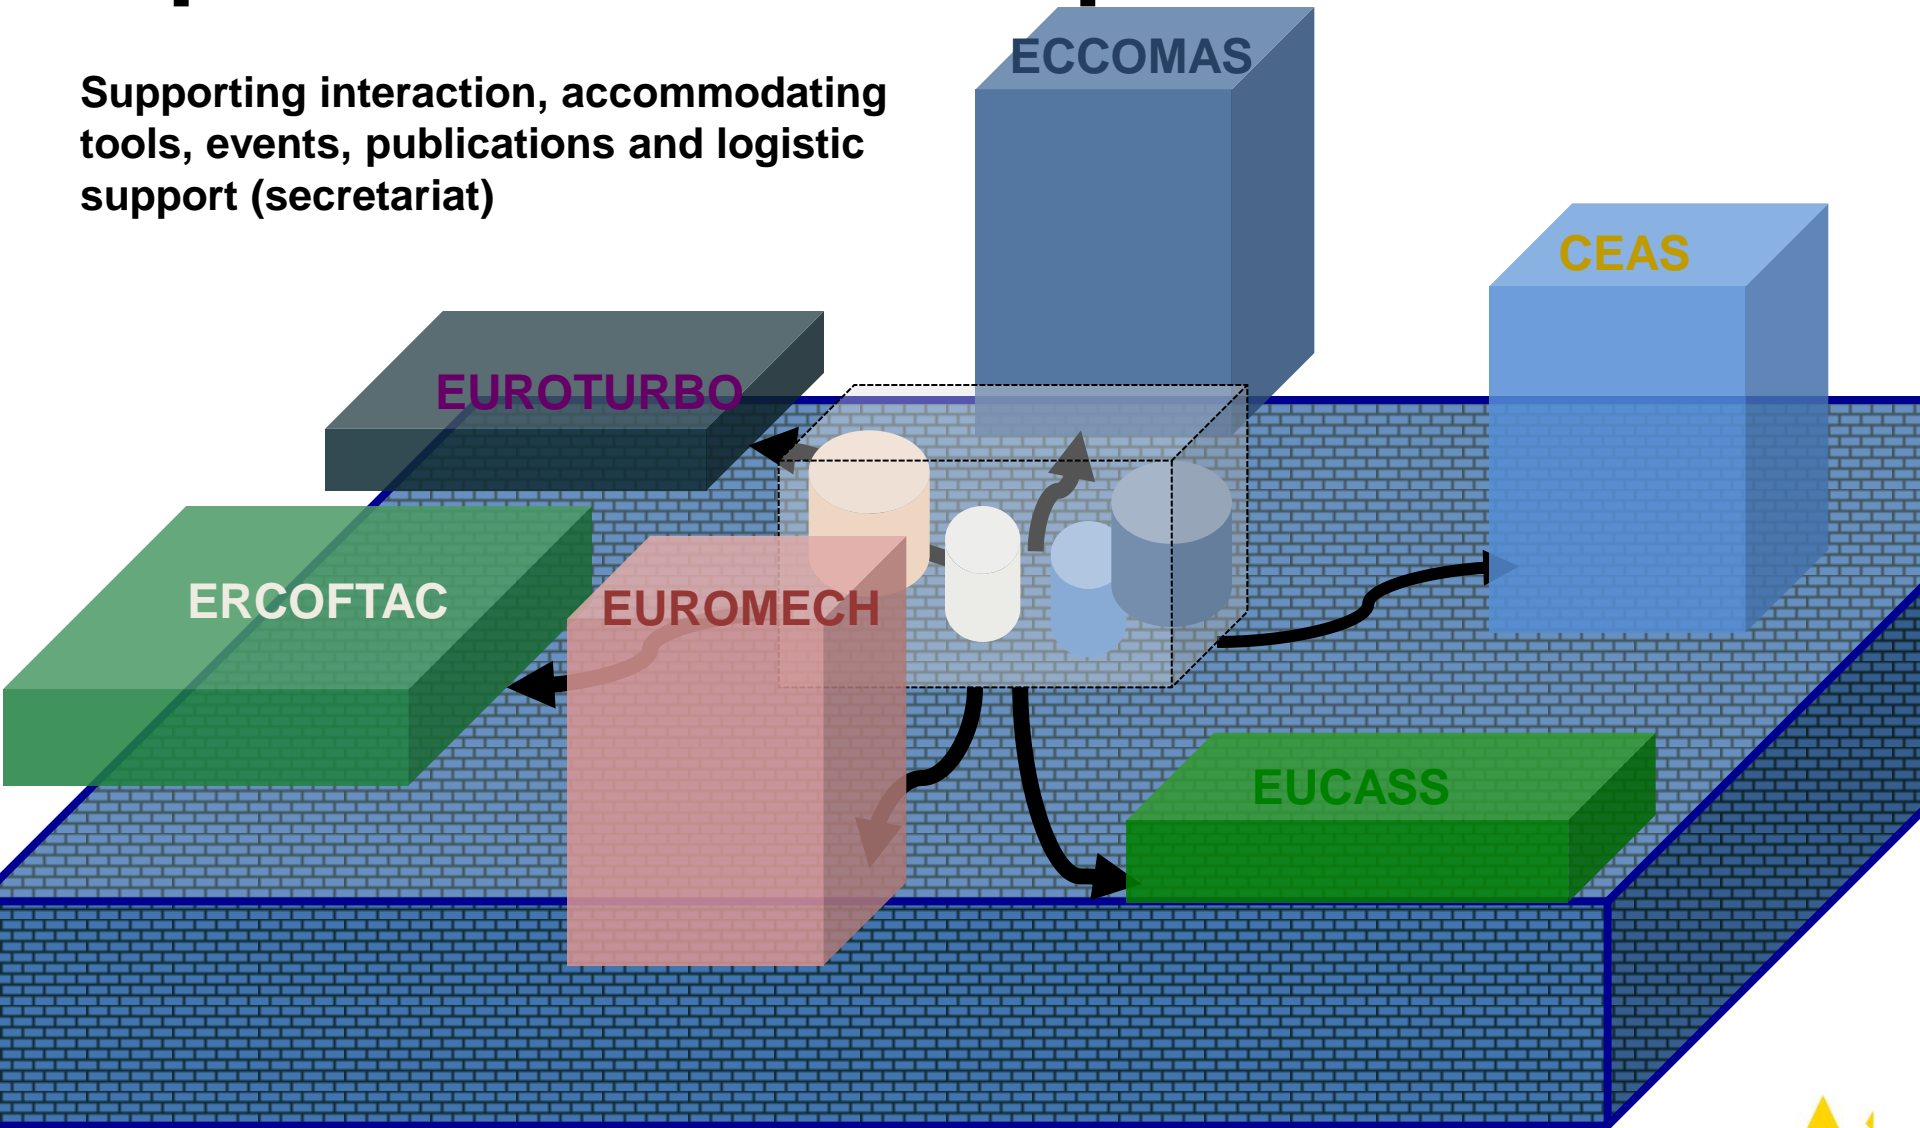

# Partners on a common ground

# Open collaborative platform

Supporting interaction, accommodating tools, events, publications and logistic support (secretariat)

# Boosting European Aeronautics research

- International impact and attractiveness of events
- High quality journals and publications
- Active associative life and research dissemination
- Identification of research community
- Consultation body for EC

**Aerospace Europe**
